

Building Energy Conservation: Case Study 1:

We wish to share one of our success results at Mumbai. Here we have implemented energy conservation measures on Performance Contracting Basis. In first phase 40% of the measures have been implemented so far. Average savings are about 12%.

Baseline: It is the energy consumption if energy conservation measures would not have been implemented (prepared using IPMVP guidelines, which are world wide acceptable. This baseline is acceptable to client as well as ESCO)

Actual Energy Consumption: It is Actual Energy Consumption after implementation of energy conservation measures. Difference in Baseline & Actual Energy Consumption is savings.

Total savings achieved so far: Rs. 1,21,57,513 (Jan-12 to Dec-12).
